Naia™ 二醋酸面料，源自日本，以其卓越的环境性能和对舒适的穿着体验而出。
Naia™ 纤维是一种聚酯纤维，属于二醋酸纤维类别，以其绿色可持续性著称。

Naia™ 面料的透气性是棉的两倍，快速干燥，触感凉爽，抗过敏，易于打理。不易缩水，褶皱快速恢复，去污能力强，抗起球性能出色。面料不仅在光泽、垂坠性和手感上表现出色，更在透气性、快干性和环保性能上树立了新的标准。它是一种值得你拥有的高品质面料。

Naia™ Diacetate fabric, originating from Japan, stands out for its excellent environmental performance and comfortable wearing experience. Naia™ Fiber is a type of acetate cellulose, belonging to the category of diacetate acid fibers, known for its green sustainability.

Naia™ The breathability of the fabric is twice that of cotton, it dries quickly, has a cool touch, is resistant to allergies, and is easy to care for. Not easy to shrink, quick recovery of wrinkles, strong stain removal ability, excellent anti-pilling performance. The fabric not only exhibits excellent luster, drape, and hand feel, but also sets new standards in breathability, quick drying, and environmental performance. It is a high-quality fabric worth having.

"海羊毛"指的是一种新型纤维——海藻纤维。海藻纤维来自海洋，是用海带等藻类植物经过一系列加工最终得到的具有可纺性的功能性纤维。海藻纤维回潮率16%，与羊绒相当，吸湿性极强，做成的服装不论是软糯的手感还是穿着舒适度上都不逊色于羊绒。海藻纤维制成的夏季羊绒衫十分透气凉爽，穿着舒适。加之海藻纤维还具有抑菌、防霉、防螨及阻燃等多种功能，利用其生产的产品的附加值和竞争力会同比提高，不得不说该材料在纺织领域有很大的增量市场和增长空间。

"Sea wool" refers to a new type of fiber - seaweed fiber. Seaweed fiber comes from the ocean and is a functional fiber with spinnability obtained through a series of processing using seaweed and other algae plants. Seaweed fiber has a moisture regain of 16%, comparable to cashmere, and has strong moisture absorption performance. The clothing made from seaweed fiber is not inferior to cashmere in terms of soft and sticky feel and wearing comfort. The summer cashmere sweater made of seaweed fiber is very breathable and cool, comfortable to wear. In addition, seaweed fiber also has multiple functions such as antibacterial, anti mold, anti mite, and flame retardant. The added value and competitiveness of products produced using it will increase year-on-year. It has to be said that this material has a great incremental market and growth space in the textile field.
